

The screenshot shows an IDE interface with two code editors open. The left editor displays `FirebaseAuth.java` with code related to Firebase authentication, including methods like `disconnect`, `signup_with_email_and_password`, and `logout`. The right editor displays `HTTPRequest.java` with code for making HTTP requests, including comments in Vietnamese explaining the logic. Below the code editors is a terminal window showing the output of a build command:

```
D:\Java\DVD_Manager>javac *.java
```

```
D:\Java\DVD_Manager>java -jar D:\Java\DVD_Manager\lib\idea_rt.jar
```

```
Process finished with exit code 0
```
