

The screenshot shows an IDE interface with two code editors open. The left editor displays `FirebaseAuth.java` with code related to Firebase authentication, including methods like `disconnect`, `signup_with_email_and_password`, and `logout`. The right editor displays `HTTPRequest.java` with code for making HTTP requests, including comments in Vietnamese explaining the logic. Below the code editors is a terminal window showing the output of a build command:

```
D:\bin\jdk\jdk-19.0.2\bin\java.exe -javaagent:D:\bin\IntelliJ\lib\idea_rt.jar=50514:D:\bin\IntelliJ\bin -Dfile.encoding=UTF-8 -Dsun.stdout.encoding=UTF-8 -Dsun.stderr.encoding=UTF-8 -classpath D:\doc\Java\DVD_Manager\out\production\authServer HTTP response code: 200
